MARIA GARVIA SOLER

FRONT-END DEVELOPER

After developing my career in sales and operations, creating my own business and coordinating teams nationally and internationally, I decide to make a professional change. I have studied in four countries in three languages; I have worked in multicultural environments in large corporations and startups, and all that experience has made me an open-minded professional with a great capacity for work, adaptation and learning.

Expert in "making things happen", I believe in teamwork and autonomy. The initiative and curiosity that led me to successfully found my startup a few years ago, now lead me to develop myself as a front-end developer.
